## 1.0 Project Overview/Description

“PlanItNow” is an innovative project that creates a more efficient and user-friendly platform surpassing the traditional event planning process, setting new standards for Planning an event. This Event Management system is crafted to optimize and merge the event planning process into a single place. This system will be beneficial for both service providers and service consumer parties. Admin team will be able to manage the system and develop the system updates.

“PlanItNow” is an all-in-one event planning management system that transforms event organization, making it more efficient and stress-free. Our project aims to revolutionize the event planning industry by providing a centralized, feature-rich platform that streamlines the entire process. Whether planning a wedding, community event, birthday party, get together, religious celebrations, this system offers the tools needed to create memorable and successful occasions.

“PlanItNow” will be available on two main platforms such as Web based(website) and as a Mobile application. For the benefit of Service consumers, rather than reaching out to your needs separately, you will be able to find all your desired services through the “PlanItNow” system. As per the traditional process of event planning, individuals must spend a lot of time looking for venues, food, decorations, photographers etc. But with “PlanItNow” you will be able to find all sorts of service providers and their packages by using the functions of the system. And for the benefit of Service providers, “PlanItNow” is a platform to display all your services along with your detailed packages which is why this system can be used by hotels, music Bands, photographers, decorators, and many more with wide array of features to assist in every aspect of event management.

When you are a service provider at “PlanItNow,” you have the opportunity and the exposure to showcase all your services and packages to every user of this system. Once you enter all your detailed information to the System, the system will auto generate a dedicated page for your business where the consumers can explore and add the package to his/her quotation.

The system will benefit the users in several ways. Its efficiency will streamline the planning process by reducing the time and effort required for coordination. Also, it helps the users to be cost effective by sticking to their original budget and not overspending. The system will facilitate easy communication between the user and the providers. Both parties will be able to communicate with the administration if any faults or emergencies arise regarding their payment methods and overall system.

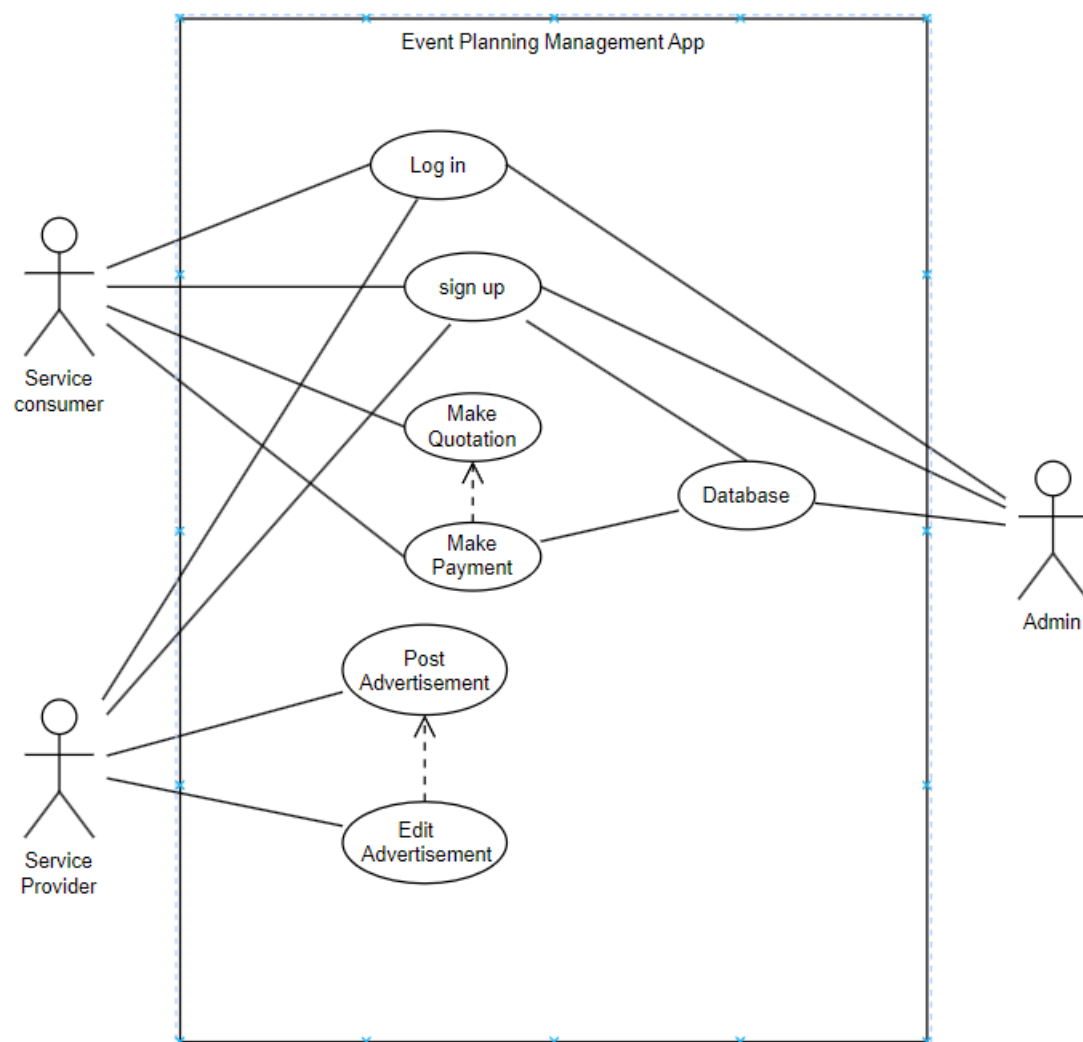

## 2.0 Project Objectives

- User friendly interface.
- Should have mobile accessibility.
- Scalability.
- Keep 2 separate databases for users and providers.
- Users must be able to take a wide range of services to cover a whole event.  
(ex: users should be able to have a successful birthday party with food and beverages, lights, flowers, decorations, venue etc.)
- Users must be able to contact the administration in case of faults, errors, complaints etc. for customer support.
- Provide recommendations/ similar services by using an algorithm.
- Must be able to send promotions, new offers via emails and notifications.
- Must be able to track and manage payments.
- Must be able to see the entire transaction/order history.

## 3.0 Target Users

- \* Service Consumers.
- \* Service Providers.
- \* Small Businesses with less opportunities

### 3.1 Use Case Diagram

## 4.0 Application Features and Description

- \* **Admin Login:** Admin will be able to log in with the admin ID and password.
- \* **User Login:** User will be able to log in with the registered email and password.
- \* **User Sign Up:** New user registration process.
- \* **Search Bar:** Allow users to search for specific contents rather than using nav bar.
- \* **My Quotation:** Allow users to make a quotation based of their requirements.
- \* **Home:** Boot up interface with contents.
- \* **About Us:** Our team, legal documents.
- \* **Help and Contact:** Help and support page if any faults and errors occurred.
- \* **Service Categories:** Categories of content.(Venues, Decorations, Food, Music)
- \* **Become a service provider:** Service Provider registration process.
- \* **Popular Categories:** Recommendation of trending and popular contents.
- \* **Select Location:** Location selector to get available providers around users.
- \* **Payment:** After the quotation is validated then the user can proceed with the payment methods.

## 5.0 Project Time Frame
